

**Seattle University**  
**2020-21 Graduate Business Certificate in Business Administration**

---

The graduate certificates in business are designed to allow working professionals to develop expertise and acquire a credential beyond their undergraduate degree. The certificate program allows students to:

- Specialize in new areas of business
- Update older information or degree
- Acquire added skills and credentials to increase their career opportunities

The program allows a student, with guidance of a graduate programs coordinator, to choose a customized program of five to six graduate business classes from the graduate courses offered through the Albers School of Business and Economics. Certificates are awarded in the following areas of specialization: accounting, finance, sustainability, marketing, innovation and entrepreneurship, business analytics, global business, internal audit, quantitative economic analysis, business administration, leadership formation and healthcare management. Course work for the certificate may be applied to other advanced graduate degrees if enrolled in those degree programs prior to completion of the certificate program.
