

Bunny Copters

For Tabling and Drop-In Events

Supplies:

- Bunny copter blanks (2 per girl)
- Paperclips (5-6 per girl)
- Scissors
- Optional: Markers/crayons/colored pencils

#1: Introduce!

- Greet passers-by and ask them if they would like to do a fun Girl Scout activity!
- Make a basic bunny copter as a demo and ask them to follow:
 1. Cut down to arrow (one "square") on the top of the bunny copter blank
 2. Fold one square toward you, the other away from you (like a helicopter)
 3. Attach one paper clip to the base
 4. Toss into the air
- Ask them to do the same, and toss it a few times

#2: Ask the Girls!

- "What did you notice about how your bunny copter flew?"
- "What would you like to change about your bunny copter?"
- "How will you change it? Do you need any other supplies (more paper clips, scissors, etc.)?"

#3: Let Them Do It!

- While they work, you can engage new passers-by and get them started on the activity
- Encourage them as they experiment
- If they get inspired, let them try multiple changes

#4: Ask the Girls!

- "What happened? What did you discover?"
- If you have time, ask: "Why do you think it happened?"

Notes:

- Typical changes include cutting the "ears" down farther and adding more paperclips.
- This simple, yet fun, activity showcases the best of Girl Scouting: girls make decisions, get hands-on, and do much more than cookies, crafts, and camping—in this case, science!
