User Story - Configurable blocklist: Users can create a blocklist and schedule an undisturbed session based on blocklist.

- UI that emphasizes **simplicity** and **clarity**.
- Getting feedback fast and often with a continuous integration deployment pipeline, **usability testing**, and direct feedback from **UserVoice**.

**UI / UX Architecture**
User Story - Visualize usage stats: Users can track their app and website usage to easily understand their digital habits.

- **Accessibility is a core value** and the UI has an accessibility mode with custom color ratios, scales easily, and has bigger fonts so that people of all backgrounds can easily navigate.
- The system is also available as a browser extension and we maintain visual consistency for users when appropriate for the form factor.
High Level Logical Components

Highlights:
- All external communication will be over HTTPS using TLS1.2
Deployment Architecture

- The microservices are independently deployable with automated rollback and incremental ramp up.
- Unit, integration, and instrumentation tests are run as part of our continuous integration/continuous delivery (CI/CD) pipeline.
