Seattle U Undergraduate National College Health Assessment, Spring 2017
High School

- The **best predictor** of how much a student will drink during college is how much they drank during high school.

- Students who do not drink during high school will have a lower chance of drinking excessively or developing problems during college.
Parents Matter!

- Parents are one of the biggest sources of influence
- Condoning or encouraging underage drinking increases the likelihood that a student will drink more when they are away from parents
- Myth: forbidding alcohol heightens a student's interest
- Zero-tolerance messages appear to be most protective against alcohol use and related consequences, even if students are already using alcohol.
- Harm-reduction messages from parents associated with the highest levels of risk behaviors
How to Help

- Have some honest conversations with your students about alcohol, marijuana, etc. and your expectations of them.

- Don’t let them off the hook if they encounter the conduct process (Integrity Formation) at SU.

- Know about the offices and resources available for your student.
